Level Descriptors

Key characteristics of a Level 4 Role

Definition of the Level 4 Role

People at level 4 require factual and theoretical knowledge in broad contexts within a field of work. Work is guided by standard operating procedures, protocols or systems of work, but the worker makes judgments, plans activities, contributes to service development and demonstrates self- development. They may have responsibility for supervision of some staff.

Example of Role at Level 4

Assistant Practitioner:

Assistant practitioners have a required level of knowledge and skill enabling them to undertake tasks that may otherwise have been undertaken by a practitioner. They will have developed specific technical skills and have a high degree of technical proficiency. They will exercise a degree of autonomy and undertake well defined tasks requiring limited judgement. They may have line management responsibility for others.

An assistant practitioner is a worker who competently delivers health and/or social care to and for people. They have a required level of knowledge and skill beyond that of the traditional healthcare assistant or support worker. The assistant practitioner would be able to deliver elements of health and social care and undertake clinical work in domains that have previously only been within the remit of registered professionals. The assistant practitioner may transcend professional boundaries. They are accountable to themselves, their employer, and more importantly, the people they serve.

The characteristics of an assistant practitioner have been developed by Skills for Health working with focus groups of employers and other stakeholders.
